

Polycarbonate sheet

Properties

Polycarbonate is a strong, durable, clear material that is flexible and at the same time significantly more impact-resistant than glass.

We use both smooth plates (2-8 mm) and rib plates/thermal plates. Both types have a UV-protective surface, which protects against yellowing and ensures a high light transmission.

The lifespan is estimated at about 10 years.

Operation and maintenance

Cleaning

- Wash the sheets with water and a mild detergent
- Rinse with clean water
- Avoid using e.g. benzene, alcohol and organic solvents on polycarbonate
