

Gutters

Properties

We use gutters made from zinc or aluzinc. Both have a long shelf life and take on patina harmoniously as the glossy surface becomes matt.

Zinc gutters are made of 100% zinc and will become matt relatively quickly. Zinc gutters withstand all climatic conditions. Estimated lifespan is 25 years.

Aluzinc gutters consist of steel coated with a mixture of aluminium and zinc. Aluzinc gutters are stronger and can, e.g. withstand leaning a ladder against them. They also maintain a glossy surface for several years. Estimated lifespan is 15 years, however, shorter in environments near the sea.

Operation and maintenance

Cleaning

- Gutters must be cleaned at least once per year. If the roof is located close to deciduous trees, it is recommended that the gutters be cleaned more often

End of Life Guide

- Ask your local waste management authority or disposal service for correct recycling or disposal of gutters
